

### Function principle

Magnetoresistive materials can change their resistivity in an external magnetic field. The variation of the resistivity is determined by the rotation of magnetisation with respect to the direction of the current flow. Permalloy ( $Ni_{81}Fe_{19}$ ) is commercially used as magnetoresistive material. The relative change of resistivity is 2-3 % for this material. The high sensitive and small size magnetoresistive sensors consist of chip 174B covered with thin film permalloy stripes. These stripes form a Wheatstone bridge, whose output voltage is proportional to the magnetic field component  $H_y$ .

### Characteristic

The bridge imbalance is a value for the magnetic field component  $H_y$  in the plane of the chip. It is of advantage to apply an auxiliary field  $H_x = 3 \text{ kA/m}$  which avoids flipping of the magnetisation of the stripes caused by disturbing magnetic fields. A perpendicular field  $H_x$  is necessary to stabilize sensor operation. This can be done by using a small permanent magnet. See information for KMZ 20 M1 / KMY 20 M. Magnetic fields vertical to the chip surface have no influence on the output voltage.

## Technical data

### Absolute maximum ratings

Parameter	Symbol	Unit	Value
Supply voltage	$V_B$	V	12
Total power dissipation	$P_{to}$	mW	120
Operating temperature range	$T_{amb}$	°C	-40 ... +125
Storage temperature range	$T_{stg}$	°C	-65 ... +150

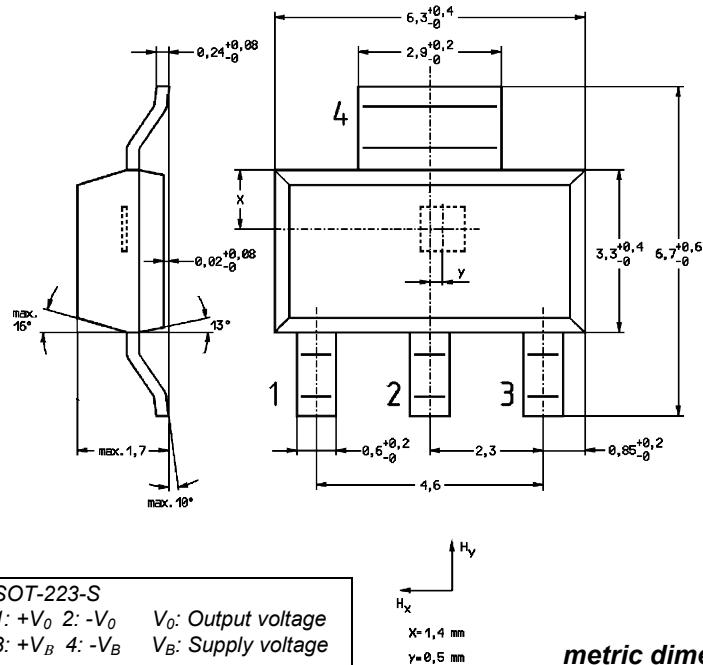

### Electrical characteristics ( $T_{amb} = 25^\circ\text{C}$ , $H_x = 3 \text{ kA/m}$ )

Parameter	Symbol	Unit	Value
Bridge resistance	$R_B$	kOhm	1.4 ... 2.0
Open circuit sensitivity	$S_V$	(mV/V)/(kA/m)	$4.7 \pm 1.0$
Output voltage range	$\Delta V_O / V_B$	mV/V	$20.0 \pm 4.0$
Hysteresis of output voltage	$V_{OH}/V_B$	µV/V	$\leq 50$
Offset voltage	$V_{OFF}/V_B$	mV/V	$\leq \pm 1.0$

### Temperature coefficients (-25 °C < $T_{amb}$ < 125 °C) of

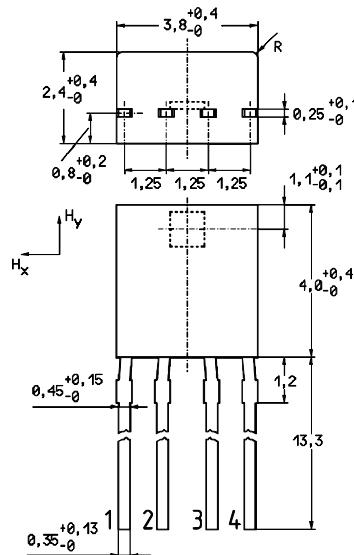

Parameter	Symbol	Unit	Value
Bridge resistance	$T_{CBR}$	%/K	$0.30 \pm 0.05$
Open circuit sensitivity ( $V_B = \text{const}$ )	$T_{CSV}$	%/K	$-0.30 \pm 0.05$
( $I_B = \text{const}$ )	$T_{CSI}$	%/K	$0.00 \pm 0.05$
Offset voltage	$T_{COFF}$	(µV/V)/K	$\leq \pm 3$

## Housing of KMY 20: SOT-223-S

metric dimensions

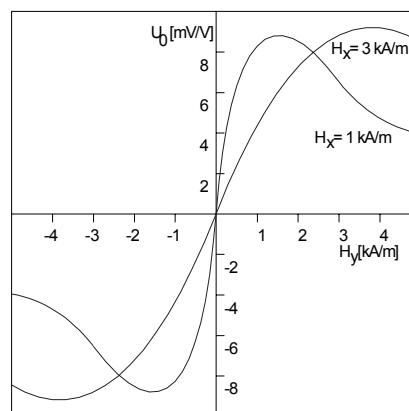

## Housing of KMZ 20: E-Line 4-Pin

metric dimensions

## Applications

- detection of weak magnetic fields, e.g. earth magnetic field
- contactless mechanical switch
- displacement measurement with high resolution
- revolution speed detection on ferromagnetic gear wheels
- contactless angle measurement
- galvanically separated current measurement
