

SA40012 Single Axis CMOS Signal Conditioning Module

The SA40012 *Single Axis CMOS Signal Conditioning Module* is a DC input/output operated device, which operates off a single ended supply, and provides a bipolar DC output. Specifically designed to interface directly with all Spectron Single Axis *Tilt Sensors*, this low power consumption conditioner is ideal for battery driven applications. Featuring a PC board mountable design, the module internally converts the DC input voltage into an AC excitation voltage for the sensor, and demodulates the sensor output into a smooth amplified DC output voltage. Incorporating a proprietary signal processing algorithm, and an external temperature compensation sensor (optional), normal measurement errors are severely reduced. The SA40012 also features overload protection, and is 100% reliability tested to provide the highest quality available.

General Specifications

Input voltage +5Vdc to +15Vdc

Input current 0.5mA @ +5Vdc, 0.9mA @ +15Vdc

Sensor excitation 380 mV pp, square wave

Input impedance 5 megohms

Output +/-1.5Vdc @ +6Vdc supply, referenced to Vref

Note; minimum output = $50mVdc + (supply\ voltage \cdot 1.5Vdc)$

Load 100k ohm minimum

Time constant 30 msec

Offset adjustment +/-45 mVdc

Output ripple 0.35% of output voltage (RG 24k ohm) Temperature

coefficients (module w/out sensor)

- Null 100 microvolts / C° (typical)

- Scale 0.02% / C° @ +1Vdc output

Output short duration Continuous (Vout and Vref)

Temperature range

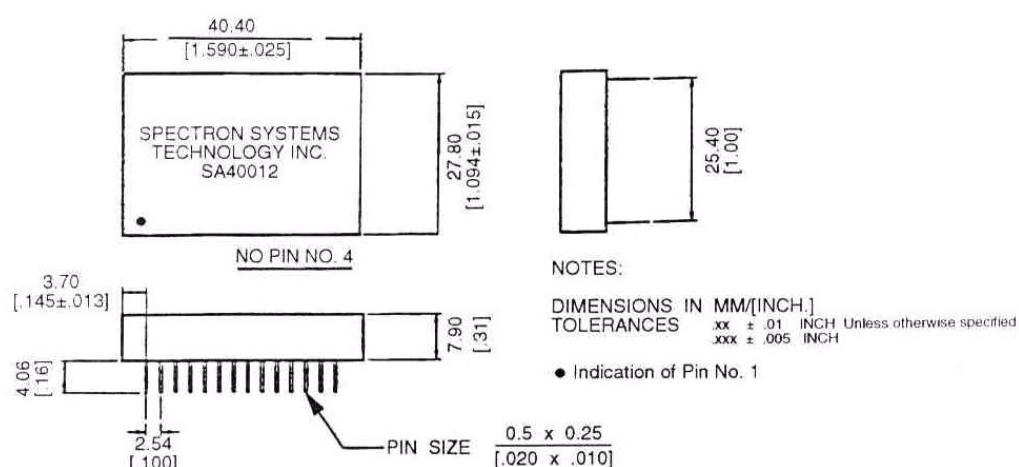

- Operating -20 to +70C°

- Storage -40 to +80C°

Temperature Compensation

- Temperature compensation of the assembly (module and sensor) can be accomplished using an external silicon temperature sensor (KTY81-120) and a resistor (.RT., see wiring diagram for typical values). With this configuration, it is possible to reduce the scale temperature coefficient error from a 0.3%/C° (nominal), to 0.03%/C° (nominal). Please see wiring diagram for connection points.
